1. Introduction to Software Engineering: Solutions

The system under consideration is not external to the system and shouldn’t be represented as an actor There are a few cases, however, when representing the system as an actor may clarify the use case model These include situations where the system initiates uses cases, for example, as time passes (Check for Outdated Articles, Send Daily

mented The study of computer architecture focuses on the interface between hardware and software, and emphasizes the structure and behavior of the system The majority of information contained in this textbook is devoted to computer hardware, and computer organization and architecture, and their relationship to software performance

Early Developments: From Difference Engine to IBM 701

• ENIAC's programming system was external - Sequences of instructions were executed independently of the results of the calculation - Human intervention required to take instructions "out of order" • Eckert, Mauchly, John von Neumann and others designed EDVAC (1944) to solve this problem - Solution was the stored program computer
